## DETAILED ACTION

### *Election/Restrictions*

1.1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claim 1- 11 drawn to a printed circuit board, classified in class 361 , subclass 788.
- II. Claim 12- 16 drawn to a printed circuit board assembly, classified in class 361 , subclass 788.
- III. Claims 17-21, drawn to method of reducing cross talk in a printed circuit board, classified in class 29, subclass 825.
- IV. Claims 22-26, drawn to method of forming a multi-layer printed circuit board, classified in class 29, subclass 825.

The inventions are distinct, each from the other because of the following reasons:

1.2. Inventions III, IV and I, II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case that the product as claimed can be made by another and materially different process. This product can be made by process with the vias of said second plurality of rows of the vias having a second diameter bigger than (or equal to) the first diameter.

1.3. Inventions group II and group I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because combination (a printed circuit board assembly) may work without subcombination (a printed circuit board) as claimed in claims 1-11 but instead of using printed

circuits board with connectors. The subcombination (a printed circuit board) has separate utility such as in devices which does not required connectors.

1.4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

1.5. A telephone call was made to Mr. K. Kanzaki (Regis. No. 37652) on December 8, 2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

1.6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

2.1. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Yuriy Semenenko whose telephone number is (571) 272-6106. The examiner can normally be reached on 8:30am - 5:00pm.

2.2. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kamand Cuneo can be reached on (571)- 272-1957. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

2.3. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
